

We are shocked! SHOCKED!! that we pay twice as much per capita for health care as any other developed country!

Could it be because we have a right to care only when our health problems have grown serious enough to become really expensive, but no right to much cheaper early treatment?

Or because every single private health insurance company uses the Enron business model, increasing profits by denying claims and refusing to insure individuals who have a greater chance of getting sick in the first place, and then pushes the human and financial costs of their policies onto the American taxpayers?

- ❖ *River's ongoing dialysis treatments will be vastly more expensive than the treatment for high blood pressure and diabetes would have been four years ago. She couldn't afford that out of pocket, and didn't have insurance.*
- ❖ *Deamonte Driver, a 12-year-old homeless child, died in 2007 after an infection from a molar spread to his brain. His mother didn't have \$80 for an extraction, so we all paid about \$250,000 in a futile attempt to save his life.*

Demand that our senators END this stupidity!

Demand that the single payer bills HR 676/1200 and S703 have cost analyses done for them just like every other half-baked "reform" plan that has been proposed so far.
